I got this book at the same time as I got Barry Thornton's Edge of Darkness. I found they were complementary in many ways. George Todd has been at this craft of making monochrome pictures for several decades, and his skill and picture and printmaking ability shine through. Mr Todd has got the picturemaker's trinity of 'tone, detail and texture' pretty much down pat, and the book gives us a fine example after fine example of that. Whereas Mr Thornton in Edge of Darkness tells us as much about his heart and his head as about his superb pictures, George Todd has provided an extremely detailed account of each picture from before the shutter was tripped to when the print was ready to mount. There is something for everyone here - technicians, printmakers, photographers, and the house guest who simply browses a well produced book of outstanding images over a cup of coffee. They won't need to read one word - the pictures will speak to them. I like the book most of all because it showcases the ability of medium format so well. If the negative sizes were not detailed, I'm sure most would think these prints were from large format negatives. I'm glad I have it in my library.

I have several books on B&w photography and George Todd's The Making of Twenty Images is the best I've read so far. I particularly like the fact that he includes his negatives as he reveals what went

into each photograph, from composition to film development, printing and mounting.

Not overly technical but reader needs basic experience in use of light meters. The author steps through his thought process in setting up for the photograph along with possible adjustments in the film processing and follow-on printing.
